

David W Millar MPhil CEng SenMWeldI

CASE STUDY

My name is David Millar and I am currently Managing Director of NST Welding (UK) Ltd, and recently I have been awarded Chartered Engineer Status in conjunction with The Welding Institute (TWI) in Cambridge.

I have worked in welding all of my working life (28 years) and have always had the position of Chartered Engineer status very clearly in my sights.

Having started my career as a Shipyard Welding apprentice I soon got a thirst to develop my qualifications and over the following years undertook various City & Guilds qualifications and other training courses suitable for my employment.

On completion of my apprenticeship I undertook various positions within the Shipbuilding industry (NDE Technician, Section leader NDE, Quality Control Mgr, Welding Engineering Mgr) and at each stage of promotion I ensured my technical qualifications were in harmony with my job.

Over the years I have achieved:

- City & Guilds: Full Technological Certificate (FTC)
- Licentiate of the City & Guilds
- Diploma in Welding Engineering
- Diploma in Management studies (DMS)
- Lead assessor with BSI
- Master of Philosophy Degree - Strathclyde University
- Certified European Welding Engineer
- International Welding Engineer

My job involves providing technical Welding Engineering assistance to customers all over the world, and it is critical that my technical ability is supported with the correct qualifications, and in my opinion having the designation CEng is the ultimate mark of a professional Engineer.
