

Scott McCrae EngTech MIWater

Having worked in the water and wastewater industry for over 20 years, in both Public and Private Sector Organisations, I have obtained a vast array of knowledge and experience throughout my career journey to date, together with a broad range of academic qualifications.

Continually building on a strong professional portfolio of project delivery knowledge and experience, I have demonstrated through a structured approach to CPD (Continuous Professional Development), the evidence to back this up.

Registration as Engineering Technician provided me with recognition of my career achievements, and has not only acted as a springboard for my career following registration, but further underpins my knowledge and experience as an engineering professional in the Water and Wastewater Industry.

I would thoroughly recommend to anyone working in the Water Industry taking the time to reflect and document your career achievements to date. This will form the first fundamental approach to having your professional efforts recognised against the Engineering Council criteria for registration as an Engineering Technician.
