

## Jeffrey Yung CEng FSOE

### CASE STUDY

I have been Associate Director for Colliers International Agency Limited since 2008. As head of the real estate management services (REMS) technical section, I look after all technical issues and am responsible for setting up and standardising technical documents, systems and procedures, as well as budget, project and environmental management.

I started my engineering career over twenty years ago and have studied both electrical engineering and building services. In 2001, I was awarded a first class honours degree in Building Services Engineering from Hong Kong's Polytechnic University and a Masters Degree in Facility Management in 2004.

Like many engineers, it was my dream to be registered as a Chartered Engineer. Chartered Engineers are recognised as the engineering elite, and their expertise and status is highly respected.

CEng status enabled me to head Facility Management for the innovative Cyberport development, an integrated business, technology and residential community at Hong Kong's Telegraph Bay. Leading a large team, we won many awards in recognition of our achievements in air quality, property management, health and safety and energy saving.

Benefiting from CEng status, I learnt to develop and apply new technologies in energy saving and introduce more efficient production techniques in facility management. My technical and commercial leadership and interpersonal skills have been significantly improved since registration, due to Continuous Professional Development and my active role within the Society.

I am also one of the founding members and Chairman of the Society of Operations Engineers (SOE) Hong Kong Regional Group.

Jeffrey Yung CEng FSOE  
Registered 2003

‘CEng registration has strengthened my ability to develop solutions to engineering problems. It has improved my career prospects and knowledge, as well as enriching my personal network.’
