

## Neil Shaftain CEng MIWater

I am a Project Engineer with Atkins, where I currently work as Construction NEC3 Supervisor for New Utilities at the London 2012 Olympic Park.

I am extremely proud to have achieved Chartered Engineer (CEng) status through the Institute of Water and the Engineering Council.

As with many of my colleagues, I had thought about the application process for many years, but I lacked the confidence, determination and time necessary to undertake the task.

However, this all changed last year through the combination of my own level of training and experience becoming sufficient and the Institute's initiative to boost applications from their members.

With the full support of the Institute and my mentors, I was able to complete the process that led to me being awarded the title of Chartered Engineer.

CEng has raised my professional profile within my project team and my company and has instilled me with the confidence to push myself into more challenging roles and responsibilities within the Water Industry.
