

## Alex Hastie IEng MIWater

CASE STUDY

I have worked in Mechanical Engineering for various organisations including Mineral Excavation, Anglian Water, CEGB, National Power and NWL for the past 40 years and followed the conventional route from apprentice (Fitter / Turner) to my present role as Mechanical Authorising Engineer for Essex & Suffolk Water (NWL).

Professional registration has always been a goal of mine, but as most of my colleagues who have progressed in their roles through a combination of experience & academic qualification will understand, it's always 'something to do later' or 'I haven't the time at the moment!'

The incentive offered by the Institute of Water for professional registration was the push I required and I can honestly say the process is not as daunting as it first appears.

I would strongly recommend colleagues, in a similar situation as myself, to make the time to pursue professional registration. I can personally say the satisfaction of recognition by your peers in the engineering fraternity has motivated me to be more proactive in the development of my CPD and feel it has broadened my view on my future career.
